THE BICYCLE WITHOUT COMPROMISE

At Cannondale, we’re dedicated to building bicycles with no compromises in design, quality or performance. This refusal to take shortcuts has resulted in the ground-breaking Cannondale aluminum bicycle. Ride one and experience the excitement of a bike that out-performs all others.

Our 1987 line of aluminum bicycles embodies this commitment, which we’ve honored since we developed the first Cannondale bike with its then-unfamiliar large-diameter tubing. Now the rest of the bike industry is struggling to keep up with the technology we pioneered.

This year, we continue to set the pace with a line of 14 aluminum bicycles, including racing, touring and all-terrain models. Every model comes equipped with the new, error-free index shifting systems. Now there’s a Cannondale for every kind of riding and for every kind of budget.

But don’t just take our word for it. The only way to feel the no-compromise difference is to test ride a Cannondale bicycle. There’s one waiting for you at your local Authorized Cannondale Dealer. For the location of one near you, call our toll-free hotline, 1 800 BIKE USA. (In AK or PA, call 1-814-623-2626.)

EXPERIENCE THE CANNONDALE DIFFERENCE

Other bike manufacturers take shortcuts to cut costs or to avoid the risks of technological innovation. Not Cannondale.

We could have compromised and used conventional-sized steel tubing to build our bikes. But our research and testing showed that a bicycle made of large-diameter aluminum tubing would be stiffer, stronger and more efficient. So that’s what we used.

We could have compromised by making no changes to our highly successful 1986 bike line. But cycling enthusiasts like you said we should
produce a more responsive racing frame and a better handling all-terrain frame. We listened. For 1987, selected racing models will feature a steeper head-tube angle and shorter wheelbase, and every all-terrain model will come with a shorter wheelbase.

We could have compromised by offering one of the limited guarantees common in the bike industry. But our belief in the importance of service ruled that out. So we adopted this guarantee: We want you to be 100% satisfied with the performance of your Cannondale product. If you are not satisfied with its performance, we will do our best to correct the problem or replace the product free of charge. This does not apply to normal wear and maintenance. In addition, if you damage your Cannondale frame, we will send you a new one for just $175 with the return of your damaged frame.

Feedback from the experienced competitors on Cannondale's racing team helps us refine our bicycles to meet the demands of top-class competition. Here Cannondale's Chuck Lawrence, named to the U.S. National Team for 1987, leads the pack en route to victory in the Connecticut Road Race Championships.
We could have compromised by having our bikes built for us in some other country where labor costs are lower. But we realized that—given a chance—American workers will make products of unsurpassed quality. So all Cannondale bikes are hand made at our plant in Bedford, Pennsylvania.

Expert welding helps make Cannondale bicycles the stiffest, most responsive bikes on the market.

Painstaking hand-finishing gives our frames their flawless appearance.

We could have compromised by joining our tubing using the "screwed and glued" method that some of our competitors employ. But we knew that welding and heat treating our tubing would make the
frame a single unit without the flexible links that plague frames made with adhesives. That's why we pioneered our exclusive welding and heat treating process.

We could have compromised by leaving the welds unfinished. That would have saved time and money, but our frames wouldn't have the smooth, sleek handcrafted look you might not have expected from Cannondale. So we hired frame finishers to meticulously sand every weld on every bike.

We could have compromised by offering only a limited selection of frame colors. But we knew that bike buyers' tastes aren't limited, so our frames are available in an array of wild Dupont Imron® colors. And if that's not enough, you can select a frame featuring our exclusive, hand-painted custom graphics.

We could have compromised by mass producing our frames like so many other bike manufacturers. But we knew that mass production can lead to poor workmanship and quality. So we hired and trained craftsmen to hand-build every one of our frames. Now all our welders and frame finishers initial the frames they work on as a sign of their commitment to their craft.
EXCEL WITH THE BIKE THAT BRINGS OUT YOUR BEST

Push yourself to your limits with Cannondale's racing bicycles. Designed to be ridden hard under the most demanding conditions, these bikes are ideal for competition, training or a tough weekend workout with your friends.

The ultimate blend of style and technology, Cannondale racing frames are built for high performance. A higher bottom bracket, a shorter wheelbase and steeper head-tube and seat-tube angles make our racing bikes more responsive to your actions. For 1987, we've squeezed even more responsiveness out of our four top-of-the-line racing bikes with our new, recalculated frame geometry featuring a shorter wheelbase, reduced trail and steeper head-tube angle. With a Cannondale racing bike, you can dive through turns, climb out of the saddle with no wasted effort, or accelerate almost instantly to an all-out sprint.

Increase your cycling efficiency and comfort with Cannondale equipment for your hands, feet and seat—cycling's three contact points.
DO OTHER SHORTS FEEL LIKE A RAW DEAL?
Our eight-panel Lycra shorts are genuinely form fitting, preventing abrasive movement against your skin. Our exclusive "Y" Cut Ultrasuede crotch won't chafe, a terry/foam panel provides support and extra padding, and silicone elastic on the legs keeps the shorts from riding up. Cannondale shorts let you ride comfortably for hours.

THE SOLUTION TO NUMB HANDS AND SORE ARMS
Our Leather/Lycra gloves protect your hands, wrists and upper arms from the numbness that strikes on long rides and the pounding that occurs when cycling on bumpy roads. Padded palms covered with supple, top-quality leather provide cushioning and ensure a firm grip on the handlebars. And colorful leather/Lycra backs stretch to fit your hands perfectly.

ARE YOUR SHOES ROBBING YOU OF PEDALING POWER?
Boost your cycling efficiency with our cycling cleats, featuring stiff nylon soles for better energy transmission, adjustable cleats for proper foot positioning, a molded heel cup to keep your feet from pulling out of your shoes, and top-quality leather uppers for durability and comfort. The shoes are also compatible with the new Look clip-less pedal system.
From the new Shimano 7 speed Dura-Ace SIS components to Mavic GP4 rims, the SR2000 is the ultimate racing bike.

COMPONENT SPECIFICATIONS:

- **RIMS:** Mavic GP4 700C tubular

Serious recreational cyclists will relish the Team Comp and its trouble-free SunTour Alpha 3000 index components.
TREAT YOURSELF TO THE SMOOTH RIDE OF CANNONDALE ALUMINUM

Pedaling across the country with 40 pounds of gear or riding five miles to work, you need a touring bike that’s comfortable, reliable and durable. It’s especially important to have a bike with a longer wheelbase and shallower head-tube angle to soften road shock, and sturdy components that are easy to care for. You’ll find all these features and more on Cannondale touring bikes.

Add Cannondale’s Bugger 4 bicycle trailer to your touring equipment when you need a dependable, problem-free way to bring your kids along on your rides. It’s also ideal for carrying camping gear, groceries and other large loads.

For an ultra-responsive bike, select one of our four top-of-the-line racing bikes, featuring our new, recalculated criterium geometry for high-performance riding. Look for criterium geometry on the SR2000, SR1000, SR800, and SR600.

*NOTE: In response to early feedback from cycling enthusiasts like you, we have changed the color options on the SR400 Racing Bicycle and the SM600 All-Terrain Bicycle. The SR400 is now available in black, or in slate with or without custom graphics. The SM600 is now available in slate for the 24" rear wheel model, or in lavender with or without custom graphics for the 26" rear wheel model.

We regret that, due to unprecedented demand for complete bicycles, we are now unable to sell framesets. "Frame Replacement" and warranty framesets are not affected by this change in policy.
PROTECT YOUR FEET FROM PEDALING PRESSURE
Ride in comfort with Cannondale touring shoes, featuring stiff soles that let you apply pressure to the pedals without hurting your feet. They also provide plenty of support for walking. For 1987, we’ve redesigned and upgraded our touring shoes by adding suede toe clip reinforcements and reflective heel patches.

CARRY YOUR GEAR IN THE AWARD-WINNING HANDLEBAR BAG
Cannondale’s Trestle Handlebar Bag makes hauling your gear a snap. It’s equipped with our unique quick-release system (patent pending) for fast, dependable, secure mounting to your bike. This innovative system has been named one of the five best new products of 1986 by Bicycling magazine.

LEAVE DISCOMFORT BEHIND WITH SHORTS DESIGNED FOR CYCLING
Cannondale touring shorts feature a fleecy crotch liner for comfort and poly/cotton construction that stretches for freedom of movement. This design means our shorts won’t chafe you like gym shorts. Two large pockets hold plenty of cargo.
A true touring machine, the ST800 comes with SunTour sealed-bearing parts, fenders, and front and rear racks.

The **Bugger 4** is the latest, most advanced version of Cannondale’s original Bugger bicycle trailer. Featuring a unibody chassis, unique torsional hitch and rugged 20” wheels with sealed bearing hubs, the **Bugger 4** provides an exceptionally smooth, stable ride. It also comes with a padded seat cushion and a sun/rain canopy.

**Capacity:** 80 pounds.

A removable canopy protects Bugger passengers and cargo from sun or rain.

Any bike becomes more versatile when you add a Bugger 4, the dependable, efficient bicycle trailer.
TAKE A RIDE ON THE WILD SIDE

Experience the sheer joy of cycling—jump on a Cannondale all-terrain bike for a ride that inspires confidence. These bikes are built for versatility, smoothing out the roughest trails and absorbing shock from the bumpiest city streets. They’re ideal for lazy weekend jaunts too. For 1987, we’ve enhanced our all-terrain line with newly recalculated frame geometry for more responsiveness, an array of wild DuPont Imron® frame colors and SunTour’s error-free AccuShift gearing. And, as you’d expect, the bikes also feature durable weather-sealed components, sure-gripping tires, comfortable upright riding position and highly maneuverable small frame sizes.

ATB FEATURES FOR SMALLER RIDERS AND OFF-ROAD ENTHUSIASTS

For shorter-than-average cyclists, we produce our smallest, frame size (16") with 24" wheels instead of 26" wheels. The smaller wheels provide additional top-tube clearance, allowing shorter riders to straddle the bike comfortably. (Note: This feature is available only on the SM900, SM800, SM600 and SM500.)

For riders who like the feel of an ultra-responsive bike, we offer a special option on two of our models. The SM800 and SM600 are available with a 24" rear wheel, which gives the bike a shorter wheelbase for superb traction. (Like the rest of our all-terrain line, both the SM800 and SM600 also are available with 26" front and rear wheels.)
TIRED OF CHAFING AND BINDING?
You can’t enjoy your ride if your shorts are chafing or binding. Cannondale’s Six-Panel Lycra Shorts let you cycle in comfort with features like a skin-hugging fit, racing cut so they won’t ride up, and a fleecy crotch for cushioning.

THirsty AND No WATer IN SIGHT?
You’ll have refreshment close at hand with our BH30 waterbottle, featuring 20 fl. oz. capacity, easily squeezable plastic and our exclusive wide mouth for adding ice cubes or drink mixes. These bottles now come in five new, exciting pearlescent colors: blue, pink, red, white and yellow.

EVER BEEN CAUGHT WITH A FLAT TIRE AND NO WAY TO FIX IT?
You’ll never be stranded by a flat tire with our Flat Fixer kit. It contains all you need for repairing a flat tire: patches, glue, tire irons and a compact, under-the-saddle bag for carrying it all.
The SM900 features top SunTour XC 9000 components and all the extras you need for superior off-road performance.
