cannondale

INTRO

WELCOME TO THE TEAM.

We are extremely proud to have the most innovative athletes as part of the Cannondale team: the precise Liquigas-Cannondale squad, the vivacious Cannondale Factory Racing team, and the mind-bending OverMountain crew. The team also includes record-breaking triathletes and Cyclocross legends. These athletes set the standard, breaking boundaries, leading never following.

But these athletes just scratch the surface of the Cannondale team. There are regional teams, your local shop team and the gang you meet for early morning rides. Few of them truly get acknowledged. But they all understand the value of ride quality and practical engineering. They are our motivation, our compass.

You may not know it, but your team is big, bigger than you think: Ivan Basso climbs the Pyrenees for you. Chrissie Wellington breaks records for you. Tinker Juarez rides every year for you. Tim Johnson slogs through the winter mud for you. Aaron Chase and Mark Weir set trends for you. In addition you have an army of passionate designers, engineers and product managers who are also on your team. None of them settle in the constant pursuit of perfection.

When you pick up a Cannondale bike, the technologies we develop like BallisTec carbon, SAVE micro suspension, Lefty, DYAD RT2, Zero Pivot or BB30 are designed exclusively for you. Whether you cross the finish line on a SuperSix EVO, watch the sun set through the trees on a Scalpel 29'er or take a Bad Girl to the art gallery opening, you will experience the same feeling.

This is what we call the Perfect Ride.

SUPERSIX EVO

> SUPER. EVOLVED.

695 GRAMS AND 142.3 NM/DEG/KG.*

BEING THE LIGHTEST IN THE WORLD, WITH THE BEST STIFFNESS-TO-WEIGHT IS IMPRESSIVE. BUT THE TRUE BEAUTY OF EVO IS ITS BALANCE OF LIGHT WITH STRONG, AND STIFF WITH SMOOTH. EVOLVE.

*ZEDLER FAHRRADTECHNIK, 4/11, 56 CM, ULTIMATE FRAME, NORMALIZED TO TOUR MAGAZINE TEST STANDARDS.

ROAD
MOUNTAIN
RECREATION/URBAN
WOMEN'S
SPECIFICATIONS

> LIGHT, STIFF AND STRONG

Our leading edge carbon construction utilizes our **BallisTec** Carbon Technology to create the lightest production road frame ever made, with the best stiffness-to-weight ever measured, with the strength to outperform even most aluminum frames.

> SPEED SAVE VERTICAL COMPLIANCE

Similar to the suspension on an F1 car, the **SPEED SAVE** vertical compliance features are engineered to help the bike roll faster. Subtle flex zones in the rear stays, fork and seat tube improve rolling speed, acceleration, cornering speed and control without negatively affecting power transfer.

> DRAG REDUCTION

The EVO achieves its incredible stiffness and strength with smaller diameter tubes than the competition. This dramatically reduces the EVO's frontal area and reduces drag without the added weight and compromises of aero shaped tubes.

IVAN BASSO.

LIQUIGAS-CANNONDALE
 PRO RIDER, WINNER
 2010 GIRO D'ITALIA.

"IT IS INCREDIBLE. IT'S SO LIGHT AND STIFF, BUT IS COMFORTABLE AS WELL, PERFECTLY BALANCED."

> RACE-WINNING PEDIGREE

Light and stiff, with an alive, communicative ride-feel, the 2012 SuperSix is the direct descendant of the frame that carried Team Liquigas-Cannondale to victory in the Giro d'Italia and Vuelta a España.

> OVERSIZED FOR POWER TRANSFER

The massively oversized **BeatBox** BB area, 1-1/8" to 1.5" tapered steerer, deep-radius headtube and oversized asymmetric chainstays, deliver point-and-shoot handling, incredible stiffness and maximum power transfer.

> HOURGLASS SEAT STAYS

Curved, hourglass-shaped seat stays allow for vertical deflection and compliance over less than perfect road surfaces. The result is improved control and comfort after long days in the saddle.

*SIZE 56, BLACK ANODIZED COLOR COMPLETE WITH HARDWARE

ROAD
MOUNTAIN
RECREATION/URBAN
WOMEN'S
SPECIFICATIONS

> SPEED SAVE ROLLS FASTER

SPEED SAVE features are engineered not simply to make the bike more comfortable but to help the bike roll faster. They deliver improved rolling speed, better acceleration and dramatically faster cornering. Engineered to win.

> TOP TUBE STIFFNESS FOR PRECISION

Steering response and stability are directly related to top tube stiffness. With a cross section of almost 20 cm² at the head tube, CAAD10's top tube is engineered to be stiff. Optimally shaped for increased knee clearance and precise handling. Pin-point steering response with rock solid stability.

> SPEED SAVE FORK

Our new **SPEED SAVE** fork achieves the elusive combination of increased fork angle for shock absorption without increasing the bike's wheelbase. The secret? The dropouts. With a subtle offset to the rear of the tapered carbon blades, the fork maintains its razor sharp handling, eliminating buzz and chatter.

› SAVE PLUS FOR LONGER, MORE COMFORTABLE RIDES

SAVE PLUS is the newly redesigned micro suspension system made specifically for our Synapse line of bikes. With even more emphasis on comfort than SPEED SAVE, SAVE PLUS' rear stays feature a flattened area that can deflect vertically to absorb road buzz and shock while the increased width resists side-to-side and torsional flex.

› SAVE PLUS MULTIFLEX SEATPOST SYSTEM*

The new SAVE PLUS Multiflex Seatpost System features two different SAVE PLUS seatpost shafts, one with firm flex, and one with softer flex so riders can tune the ride-feel to their preference. Also compatible with 2009-2010 Synapse frames for owners who wish to upgrade.

*Second seatpost shaft offered after-market

› SAVE PLUS FORK SMOOTHS THE ROAD

The new SAVE PLUS fork is a gorgeously smooth-riding combination of sophisticated carbon lay-up and shaping, and offset dropouts for increased vertical deflection and vibration absorption with no loss in steering precision.

> RIDE SMOOTHER. RUN FRESHER

The Slice's **AERO SAVE** rear stays deflect vertically to absorb road shock, while staying extremely stiff laterally and torsionally. Great power transfer and comfort that delivers you to the run feeling fresh.

> SUPERB GEOMETRY

The refined geometry and two-position aero seatpost enable riders to find their perfect aero position. The stable, predictable handling and **AERO SAVE** features help them stay in it longer.

> SPEED SHADOW SEAT TUBE

The shape of the **SPEED SHADOW** seat tube helps smooth out turbulent airflow and pass it smoothly over the rear wheel, reducing drag and increasing speed.

> HEADS-UP RACE GEOMETRY

The CAADX has a slightly taller head tube and slacker head angle than the SuperX, providing a more comfortable upright position and super stable handling.

> CANNONDALE ALUMINUM EXPERTISE

With taper-butted, shaped tubes joined by our trademark double-pass smooth welds, CAADX continues our tradition of aluminum mastery.

> HOURGLASS SEAT STAYS

The hourglass shape of the seat stays offers significant vertical compliance for comfort and control over the harsh ruts and mud of 'cross, while remaining laterally rigid for power transfer and confident handling.

CLAYMORE

NO. LIMITS.

THE CLAYMORE IS A TWO-BIKES-IN-ONE TRAIL WEAPON. AT A FLICK OF THE SWITCH, THE CLAYMORE CHANGES FROM A 110MM-TRAVEL ALL-AROUND TRAIL BIKE TO A 180MM-TRAVEL DOWNHILL CHARGER. EXPAND YOUR BATTLEFIELD.

> DYAD RT2 – ADJUST YOUR ATTITUDE

A two-position shock mount lets you choose your starting geometry, then **DYAD's** dual modes, Elevate (110mm) and Flow (180mm), let you further tune the geometry and ride-feel on the fly. It is like having two different bikes at the flick of a switch.

> ECS-TC THRU-AXLES

The **ECS-TC** (Enhanced Center Stiffness – Torsion Control) System is all about reducing flex at pivots and links. 15mm thru-axles at the shock link and main pivot are clamped on both sides, tying the two sides together. This dramatically increases stiffness for instant responsiveness and control.

> DOUBLE-STACKED REAR DROPOUT PIVOT BEARINGS

As part of the **ECS-TC** System, we double-stack the bearings at the rear dropout pivots. By placing two bearings side-by-side in each pivot, we eliminate twisting play in the bearings, radically stiffening the swingarm.

HIGHLAND MOUNTAIN

AMERICA'S PREMIER MOUNTAIN BIKE PARK

Highland Mountain Bike Park- America's only 100% dedicated lift accessed bike park sits at the foothills of New England's White Mountains, just a short drive from the Boston Metro Area. Highland is globally recognized for its quality and innovation- everything at Highland is done with precision and dedication from trail building to having the top rental fleet in the industry, nothing is taken lightly.

Whether you're new to the sport or one of the world's best riders, Highland has something for everyone with an extensive network of trails allowing for some of the world's most progressive terrain.

Highland Camps allows riders to learn in a controlled environment, giving them the opportunity to take their riding to the next level while learning from some of the top athletes in the world.

OverMountain athlete Aaron Chase says it best- " The Crew at Highland never ceases to amaze me with their dedication and passion to the sport of mountain biking. Everything they touch is done to perfection, from the perfectly groomed trails to the details in the HTC training center- keep an eye out, because Highland is the future of our sport."

At Highland Mountain, you will find Cannondale **OverMountain** bikes ready to help you push it from the gentle Fancy Feast to the infamous Hellion.

JEKYLL

ATTITUDE. ADJUST.

THE MOST VERSATILE BIKE ON THE MOUNTAIN. FLOAT UP THE CLIMBS WITH AN EFFICIENT 90MM-TRAVEL TRAIL MACHINE. ROCK THE DESCENTS WITH A PLUSH 150MM OF LONG-TRAVEL GOODNESS. RIDE ANYWHERE. RIDE ANYTHING. EXPAND YOUR BOUNDARIES.

VICTORIES & AWARDS

"2011 Editor's Choice"

"Might just be the ultimate mountain bike."
-Bike, USA 1/11

"This bike changes the trail riding experience and takes mountain biking to a whole new extreme." "There's truly no other bike that can compete against the Jekyll 1000."
-Bicycling, USA 5/11

ROAD
MOUNTAIN
RECREATION/URBAN
WOMEN'S
SPECIFICATIONS

> DYAD RT2 – ADJUST YOUR ATTITUDE

The **DYAD** shock gives the Jekyll its two different personalities – **Elevate** (90mm) and **Flow** (150mm). Each with its own air spring volume and damping circuits, and its own ride geometry. It is like having two different bikes available to you at the flick of a switch.

> ECS-TC SYSTEM

The **ECS-TC** (Enhanced Center Stiffness-Torsion Control) System uses features like these clamped 15mm thru-axles and doubled bearings at the rear dropouts to eliminate flex and play in the links and pivots. This removes the vague, imprecise feeling felt on so many dual suspension bikes.

> LIGHT AND TOUGH

In either **BallisTec** Carbon or **SmartFormed** Alloy, the incredibly light, unbelievably tough Jekyll frames let you climb with the whippets but descend with the pitbulls.

MARK WEIR.
OVERMOUNTAIN AGGRESSIVE ENDURANCE SPECIALIST.
"THE JEKYLL GIVES SPEED UP OR DOWN BY THE FLICK OF A LEVER. IT'S A NEW TRAIL WEAPON FOR THOSE WHO WANT THE BEST OF BOTH WORLDS. ON POWER EFFICIENCY WITH FULL DOWNHILL CAPABILITY."

LEFTY/HEADSHOK

LIGHTER. STRONGER. STIFFER. SMOOTHER. DEFY. CONVENTION.

THE MOUNTAIN BIKE WORLD CAN BE DIVIDED INTO TWO BASIC GROUPS: PEOPLE WHO LOVE LEFTY, AND PEOPLE WHO HAVEN'T YET TRIED LEFTY. THERE ISN'T A LOT OF MIDDLE GROUND BECAUSE MOST PEOPLE WHO RIDE LEFTIES FIND THEY SIMPLY CAN'T GO BACK TO RIDING OTHER FORKS.

> DON'T SLIDE. ROLL

Rather than sliding on bushings like other forks, **Lefty** rolls smoothly on precision-ground needle bearings. These bearings eliminate friction and allow the **Lefty** to remain plush and active under loads that would cause a bushing fork to bind and stick. Better suspension equals better control.

> OPI

Our patented 3D forging process, used for parts like the **OPI** outer leg/clamp structure, the **OPI** inner leg/axle structure, and our **OPI** stem/steerer, integrates multiple parts into single forged pieces, reducing overall weight and increasing strength.

> SUPERIOR DESIGN

Lefty's inverted double-clamp design is stiffer, stronger and lighter than the normal single crown designs. When **System Integrated** with the **OPI** stem/steerer, it forms the lightest, most precise suspension system available.

> LEFTY IS LIGHTER.

Our lightest Lefty, the **SPEED Carbon XLR**, weighs an unbelievable 1250g. Even our heaviest Lefty, at 1445 grams, is lighter than most of our competitors lightest race offerings.

> LEFTY IS STRONGER.

XC weight meets dirt jumper tough. Lefty's unconventional inverted design, with its oversized steerer, massive outer tube and beefy dual crowns, gives even the lightest carbon Lefty the strength to go head-to-head in destructive testing with forks designed for much more abusive riding.

> LEFTY IS STIFFER.

Despite weighing less than the lightest XC race forks, Lefty's stout structure combined with its "square-in-a-square" stanchion design allow it to post deflection numbers comparable with the burliest thru-axle forks. Testing proves Lefty beats out traditional all-mountain and freeride forks in stiffness to weight. (Tested by Bike magazine Germany, January 2011)

> LEFTY IS SMOOTHER.

The heart of all HeadShok and Lefty designs, Cannondale's patented 88 Needle Bearing Technology keeps the suspension rolling fluidly, regardless of load. Unlike with normal bushing forks, hard braking, impacts and steering forces have no effect on the shock's ability to move, which allows the wheel to track the ground freely and keeps the rider in perfect control.

SRAM

> TWEAK. REFINE. TWEAK. REFINE. LEAP AHEAD.

CANNONDALE IS EXCITED TO PARTNER WITH SRAM ON MANY OF OUR PREMIER TEAMS AS WELL AS ON MANY OF OUR PRODUCTS. SRAM IS THE CHOICE OF LIQUIGAS-CANNONDALE, CANNONDALE FACTORY RACING, CANNONDALE CYCLOCROSSWORLD AND MANY OF OUR WORLD-CLASS ATHLETES.

SRAM RED: THE PRO GRUPPO

SRAM RED is the first choice for riders and racers who won't accept any compromise. The most challenging races in the world have been won on SRAM RED, including the Tour de France, Giro d'Italia and Paris-Roubaix. Liquigas-Cannondale is SRAM RED-equipped. Its success in the pro peloton speaks for itself. Featured on the SuperSix EVO, the Synapse Hi-MOD and the SuperX.

SRAM APEX: WHEREVER THE ROAD TAKES YOU

You like to climb long mountain passes, or your local hill, but don't want clumsy triple cranks on your bike? With the first 11-32 cassette for the road, and the new SRAM Apex compact crankset, you will have a wider gear range than the most popular triple combinations. Climb and descend more efficiently with SRAM features like Zero-loss, reach-adjust, and DoubleTap shifting. Featured on the Synapse.

ZIPP 303 CX

The qualities that make the 303 ideal for "road" races like Paris-Roubaix also make it the ultimate cyclocross wheelset. Despite its toughness and stability, the 303 Cyclocross is lighter than many dedicated climbing wheelsets. At just 1206 grams, the 303 provides excellent lateral stiffness when accelerating out of technical corners and punching over short, steep hills.

RZ ONE TWENTY

SCALPEL

CUTTING. EDGE.

THE LIGHTEST, STIFFEST, MOST RESPONSIVE DUAL SUSPENSION XC RACE BIKE IN THE WORLD. WITH RACE PROVEN *ZERO PIVOT* TECHNOLOGY, *BALLISTEC* CARBON CONSTRUCTION AND FULL *SYSTEM INTEGRATED* COMPONENTRY, THE SCALPEL IS THE ULTIMATE CROSS-COUNTRY RACE WEAPON.

VICTORIES AND AWARDS

ROAD
MOUNTAIN
RECREATION/URBAN
WOMEN'S
SPECIFICATIONS

SYSTEM INTEGRATION

Scalpel is **System Integration**. We achieve unbelievable weight saving and efficiency by designing components and frames to work together. Our **Lefty** fork, **Si OPI** Stem, and **Hollowgram** SL BB30 crankset give us system stiffness and weights that our competitors can only dream of.

BALLISTEC CARBON

The Scalpel frame weighs just 1590 grams with shock! Made primarily from ballistic armoring fibers and high-impact resins, our **BallisTec** carbon construction ensures that its feathery weight doesn't come at the expense of strength or stiffness. Race with confidence.

ZERO PIVOT

Scalpel achieves 80mm of efficient, progressive rear suspension without pivots, bushings or bearings. Through radically advanced carbon lay-up and shaping, the seatstays and chainstays are allowed to flex vertically while maintaining best-in-class lateral and torsional stiffness-to-weight numbers. Pure efficiency.

> SUPER LIGHT WEIGHT

At just 1450 grams, the Flash Alloy frame is lighter than many of our competitors' carbon race bikes.

> CANNONDALE ALUMINUM

Flash's sophisticated **SmartFormed** tubing, and trademark double-pass smooth welds showcase our almost 3 decades of aluminum supremacy.

> SPEED SAVE REAR STAYS

Careful shaping and wall thickness manipulation on the chain stays and seat stays allows them to deflect vertically while remaining stiff laterally and torsionally, absorbing shock and enhancing control.

TRAIL SL AND TRAIL

TRAIL. BLAZER.

PACKED WITH FEATURES AND TECHNOLOGY FROM ITS UPPER END SIBLINGS, THE TRAIL IS THE BIKE THAT WILL USHER YOU FOREVER INTO THE WORLD OF FAT TIRES, OFF ROAD TRAILS AND BIG SMILES. LET THE GOOD TIMES BEGIN.

> RACE DNA

The Trail bikes have racing in their blood. They share the geometry and many of the features of their Flash brethren for a ride that is fast, snappy and agile. The Trail SL's all use 1.5" steerers for increased strength and stiffness.

> CANNONDALE ALUMINUM CRAFTING

The Trail's purposefully shaped tubes, internal taper-butting and trademark double-pass smooth welds highlight Cannondale's aluminum expertise.

> SAVE COMFORT ENHANCING REAR STAYS.

The chain stays and seat stays are designed to work together to absorb shock, while preventing side-to-side and twisting flex. This adds up to better comfort and great power transfer.

SCALPEL 29'ER

SMOOTH. OPERATOR.

THE SCALPEL 29'ER TAKES FEATURES FROM THE FLASH 29'ER, SCALPEL, RZ AND OVERMOUNTAIN BIKES AND BLENDS THEM INTO AN ALL NEW LIGHTWEIGHT TRAIL ROCKET. FOR ROUGHER RACES, MARATHONS AND EPIC TRAILS THE WORLD OVER, THE SCALPEL 29'ER IS YOUR INSTRUMENT — GET READY TO OPERATE.

ROAD

RECREATION/URBAN
WOMEN'S
SPECIFICATIONS

> ZERO PIVOT FLEXING SEAT STAYS

Thanks to radically advanced carbon construction, our **Zero Pivot** Flexing Seat Stays deliver lateral and torsional rigidity that no single-bearing pivot can match, while also eliminating the pivot's unneeded weight. Pure efficiency.

> S1/SYSTEM INTEGRATED FRONT END

Our Lefty fork is Lighter, Stiffer, Smoother and Stronger than any other 29'er fork on the market by a significant margin. When you combine it with our -15 degree **DPI** Adjustable Stem/Steerer, you create the perfect 29'er front end. Maximum steering precision with minimal weight.

> ECS-TC THRU-AXLES AND SEAT STAY BRIDGE

For class-leading stiffness, we borrowed the **ECS-TC** clamped 15mm thru-axles from our OverMountain bikes, and added a stout integrated seat stay bridge/clamp. This configuration locks the two seat stays together and prevents rotational deflection for exceptional system stiffness.

FLASH CARBON 29'ER

BIGGER. BETTER.

OUR FLASH 29'ERS SIMPLY ROCK. *BALLISTEC* CARBON AND *SPEED SAVE* FEATURES MAKE THEM LIGHT, STIFF AND SMOOTH, AND OUR 29'ER RACE GEOMETRY MIMICS THE WHEELBASE AND TRAIL OF OUR 26" RACE BIKES FOR INCREDIBLY NIMBLE HANDLING. ROLL ON.

VICTORIES & AWARDS

ROAD
MOUNTAIN
RECREATION/URBAN
WOMEN'S
SPECIFICATIONS

› SPEED SAVE ROLLS FASTER

The **SPEED SAVE** rear stays form a ride-tuned micro suspension system that is engineered not simply to add comfort but to help the bike roll faster, accelerate better and corner harder. The **SAVE** seatpost adds over 20mm of comfort enhancing flex to the system.

› SYSTEM INTEGRATION

29'ers love **Lefty**. It's true. The **Lefty's** incredible stiffness, light weight and smoothness are even more apparent with the big 29" wheels. When combined with the superlight **Si OPI** stem/steerer, and the **Hollowgram SL BB30** Cannondale's **System Integration** saves hundreds of grams over competitors' offerings.

› CONTINUOUS CARBON

On the Flash Carbon 29'er, continuous strands of high-modulus stiffening fibers run along the outer edges of all the tubes from head tube to rear dropouts. This network of fibers connects the key parts of the frame to increase lateral rigidity and responsiveness, while minimizing weight.

> TRAIL 29'ER GEOMETRY

The Trail SL 29'er geometry features a slightly longer wheelbase and slacker head angle than the Flash 29'er for a stable, confidence-inspiring ride.

> SAVE COMFORT ENHANCING REAR STAYS

The chain stays and seat stays are designed to work together to absorb shock, while preventing side-to-side and twisting flex. This just adds to the inherent comfort of the larger wheels.

> 1.5" S/H HEAD TUBES

To improve stiffness, steering precision, and strength, all Trail SL 29'ers use forks with 1.5" steerer tubes. This subtle detail makes a big difference on the trail.

ADVOCACY

WHERE WOULD YOU RIDE IF THERE WAS NOWHERE TO RIDE?

We don't want to sound like your parents, but access and the ability to ride your bike reasonably safely doesn't grow on trees. If you want to ride your bike and enjoy its freedoms, you have to fight for it. You have to convince corporations, towns and cities to shed the car-only mentality and provide facilities and funding for two-wheeled, human-powered transport. This takes a lot of time, effort and resources.

Luckily, there are organizations out there whose sole purpose is to further the needs of cyclists. They exist to ensure that bikers get fair and equal representation, to lobby for alternate transport funding and to ensure that beautiful swaths of countryside remain open to pedal-powered pursuits.

Below, you'll find a few people who are fighting for us. Now is the time to help influence the direction of cycling as an alternate form of transport and recreation. Help support those who spend every waking moment creating more ways for all of us to enjoy our bicycles.

WE SUPPORT THESE ORGANIZATIONS, AND WE ASK YOU TO ASSIST TOO.

peopleforbikes.org

SUPPORTING PEOPLE FOR BIKES

Imagine one million people signing a petition in support of a better future for bicycling in the United States. We've partnered with People for Bikes to make that happen. By sending a unified message to our elected leaders, the media and the public, we can tell them that bicycling is important. With your help, we can ensure that our sport is properly promoted, funded and supported. More rider friendly communities, bike lanes and bike paths equal safety and fitness for all of us. Sign the pledge today at <http://www.peopleforbikes.org/>

SUPPORTING BIKES BELONG

We're supporting Bikes Belong and its mission to get more people riding bicycles. Since 1999, they've focused their efforts on advocating for more funding for new bicycle facilities that would increase bike riding, boost public health and strengthen the bike business. Their goal: creating safe places to ride so more people will bike, and bike more often. Learn more at <http://bikesbelong.org/>

SUPPORTING IMBA (INTERNATIONAL MOUNTAIN BIKE ASSOCIATION)

Cannondale's support of IMBA helps ensure that mountain bikers everywhere continue to have the land access rights, quality trails, and commitment to advocacy that makes the sport truly fun and enjoyable. Cannondale was one of the first sponsors of IMBA in 1991 and is proud to continue its support of the organization. What would you do without trails? <http://www.imba.com/>

BRUSHED ALUMINUM (GLOSS) (RAW)

TRAVEL IN STYLE

With sleek, functional tube shapes, oversized head tubes, and suspension forks on most models, the Quick CX makes a statement on the city streets but is up to the challenges of excursions on rougher roads and bike trails.

SAVE VIBRATION DAMPING STAYS

Optimized rear stay shaping provides bump absorption, comfort and enhanced control with no loss in power transfer.

HEADS-UP RIDING

The Quick CX geometry delivers an upright, stable riding position for increased comfort, visibility and enjoyment. Relax and enjoy the ride.

WOMEN'S
SPECIFICATIONS

> LIGHTEST AND STIFFEST

It's the lightest, most torsionally rigid tandem on the market. No nervous flex when powering out of saddle. Responsive handling and sure-footed stability when bombing the descents. Pure speed. Pure confidence. Pure performance.

> OPTIMIZED COCKPITS

A taller head tube and shorter top tube give the captain better control and more comfort, while the stoker gets increased standover clearance for easier starts and stops.

> CANNONDALE ALUMINUM

A structure as long and complex as a tandem is the perfect showcase for our aluminum skills. The box section **Boom Tube**, oversized chain stays, disc brake dropouts and smooth welds demonstrate our expertise.

> ONE SIZE FITS ALL

Lower standover, a custom 520mm seatpost and an adjustable stem lets the Hooligan fit all sizes of rider and all styles of riding - from low and aggressive to upright and comfy.

> DELTA V

The **Delta V** frame configuration is light and gorilla-strong, and its excellent standover gives the rider plenty of clearance for agile street moves.

> SLIDE 2GO® ACCESSORY MOUNTING BRACKET

The Hooligan features a convenient, secure, **System Integrated** head tube mounting point for **Slide 2GO** accessories.

KEY TECHNOLOGIES

SAVE MICRO-SUSPENSION TECHNOLOGY

SAVE MICRO-SUSPENSION TECHNOLOGY

MORE COMFORT. MORE SPEED.

SAVE Micro-Suspension Technology is our series of four ride-tuned micro suspension systems designed to reduce road shock and vibration. Through the use of sophisticated carbon layups and highly-manipulated aluminum we create areas on the rear chainstays and seatstays, fork blades or seatpost that resist side-to-side forces while absorbing vertical forces. This translates into reduced fatigue and increased comfort, letting you ride longer and ride faster.

SPEED SAVE RACE-FOCUSED

Like the suspension on F1 cars, SPEED SAVE features are engineered to make the bike faster, not just more comfortable. Emphasizing light weight and torsional rigidity, SPEED SAVE delivers improved rolling speed, better acceleration, and faster cornering speeds without affecting power transfer. Found on SuperSix EVO, CAAD10, SuperX and Flash models

SAVE PLUS COMFORT-RACE

SAVE PLUS offers even more shock absorption and rider protection than SPEED SAVE. Perfect for carrying top speed over the cobbles of northern Europe or for smoothing out your next Gran Fondo. Found on Synapse Carbon and Synapse Alloy.

AERO SAVE AERODYNAMIC

AERO SAVE mates energy saving shock absorption with slippery aerodynamic shapes. By absorbing the jarring vibrations of the road, AERO SAVE allows you to stay in the aero position longer, stay in better control over rough surfaces, and come off the bike fresher for the run. Chrissie Wellington's secret weapon. Found on Slice.

SAVE EVERYDAY, MIXED-SURFACE RIDING

Simple and effective SAVE features, engineered to protect you from energy-sapping vibration. SAVE will smooth out your ride, whether dropping off a curb, dodging obstacles on city streets or hopping logs off-road. Found on Quick, Bad Boy, Bad Girl, Trail, CAAD8 and Tesoro.

ECS-TC (ENHANCED CENTER STIFFNESS – TORSION CONTROL) SYSTEM

ECS-TC (ENHANCED CENTER STIFFNESS – TORSION CONTROL) SYSTEM

A frame is only as stiff as its weakest parts. On dual suspension bikes, those weakest parts are often the crucial bearings and links that join the swingarm to the front triangle. The vague, imprecise sensation felt on so many bikes is caused by the subtle movement and flex that occurs in the connecting hardware as the loads on the bike shift from side-to-side. Individual cartridge bearings all exhibit slight lateral play as the races shift and begin loading the bearings. Links and axles often flex and rotate relative to each other, and these small factors all combine to negatively influence what we call Center Stiffness. To create bikes with solid Center Stiffness, which respond instantly to rider input and deliver unprecedented sensitivity and feedback, we designed a multi-part system, eliminating any flex and play in the links and bearings.

DOUBLE CLAMPED 15MM THRU-AXLES

The ECS-TC system uses 15mm thru-axles for the key pivots. By placing axle bearings in-board and clamping the ends of the axle, the axle becomes a structural part of the link or swingarm. Tying the two sides of the link or swingarm together via the axle in this manner radically increases the system's ability to resist twisting loads.

ULTRA-WIDE BEARING PLACEMENT

Just like you are more stable standing with your feet apart than together, the further apart you can place cartridge bearings, the better they can support each other and the stiffer the system can be. ECS-TC systems always space the bearings as widely as possible.

DOUBLE-STACKED REAR DROPOUT PIVOT BEARINGS

At the rear dropout, where the wheel prevents the two pivots from being joined by an axle, we double-stack two bearings side by side in each pivot. This greatly increases the seat stays ability to instantly resist twisting loads, making for an incredibly solid feeling swingarm.

COLLET SLEEVE BEARING PRELOAD

Rather than rely on spacers or washer to take up the space between the links and bearings like other systems, the ECS-TC system has an innovative collet-style preload system. Sitting between the clamp and the axle, the collet sleeves slide into place against the bearing, eliminating any play and allowing perfect centering of the link.

SMARTFORMED ALLOY

The distilled result of three decades of accumulated aluminum construction experience, SmartForming techniques deliver incredibly precise wall thickness distribution and tube shapes, concentrating material exactly where needed to maximize stiffness and strength, while shaving every last extraneous gram from the structure. Internally, all butting is accomplished via smooth, tapered transitions to eliminate the abrupt changes in material thickness which cause stress-risers.

Unlike the putty-and-paint "smooth" welds of our competition, Cannondale's legendary double-pass smooth welds create the strongest possible joints. Combined with our post-weld, heat-treat process that creates an true uni-body finished structure, and you've got simply the most advanced aluminum frames.

DYAD RT2 DUAL SHOCK

DYAD RT2 DUAL SHOCK

Developed in collaboration with Cannondale, the dual-travel, dual-personality FOX DYAD RT2 is actually two completely different shocks housed in one package: Elevate – a shorter travel, smaller volume air shock for rolling and climbing terrain, and Flow – a longer travel, high volume linear air shock for aggressive descending. Activated by a handlebar-mounted lever, each mode has its own dedicated damping circuits, fully optimized for the intended terrain. Rather than try to make one shock handle everything, we were free to create separate suspension responses for different needs – active and super efficient for the flats and climbs, ultra plush and bottomless for the descents.

Switching between the Elevate and Flow modes also changes the bike's sag point and geometry, a feature we call Attitude Adjust Geometry. In Elevate mode, the bike rides higher, resulting in steeper head and seat angles and keeping the rider in a better position for climbing and tight technical terrain. In Flow mode, the BB drops, lowering the center of gravity and making the angles slack and stable, perfect for charging descents.

With the DYAD RT2, it fundamentally is like having two different bikes available to you at the flick of a switch. Elevate your soul and let it Flow.

ZERO PIVOT TECHNOLOGY

Zero Pivot technology does just what the name implies – it eliminates traditional bearing pivots, and replaces them with flexing carbon fiber structures, which is actually not as crazy as it sounds. Done correctly, a flexing carbon structure can be designed to last a virtually infinite number of cycles, while eliminating the weight, play and

ZERO PIVOT TECHNOLOGY

wear of bearing connections. We have developed proprietary carbon construction techniques that enable the Zero Pivot stays flex freely in one direction only, while actually resisting side-to-side and twisting loads better than a bearing pivot can. Zero Pivot is what allows the Scalpel to be not only the lightest dual suspension frame in the world, but to also have the best stiffness-to-weight ever recorded.

OPI (ONE PIECE INTEGRATION)

Cannondale's patented 3D forging process allows us to take structures that would ordinarily consist of multiple pieces that would be bolted, bonded, welded or otherwise joined together and turn them into single-piece forged parts. By forging the pieces from a single block of aluminum, we end up with exceptionally good grain alignment, which makes the parts stronger, and we eliminate excess, overlapping or redundant material, which makes them lighter. This technology makes parts like the Lefty OPI outer tube/clamp structure, the Lefty OPI inner leg/axle, the OPI one-piece stem/steerer and the Backbone of the RZ120 possible.

BALLISTEC CARBON

Our High Strength, High-Impact Carbon technology. We begin with a type of carbon fiber created by the military for ballistic armoring. It's expensive, rare, and government controlled; to prevent it from falling into the wrong hands and being used militarily, we have to sign documents that account for the use of every kilogram of fibers we buy. This is some seriously tough stuff. The resins we use are High Strength, High Impact resins similar to what is used in the construction of carbon baseball bats; light, stiff and designed to endure thousands of deformation cycles. We combine these fibers and this resin in a lay-up designed to maximize the anisotropic (direction-

OPI (ONE PIECE INTEGRATION)

specific) qualities of the fibers, providing a carbon structure that is extremely light, extremely stiff and capable of absorbing tremendous impact without damage or loss of structural integrity.

Only once the frame has passed all of our extremely tough destructive and fatigue testing do we go back and begin adding the stiffer, but more brittle high-modulus and ultra-high modulus fibers strategically simply to enhance stiffness and tune the ride-feel. By using these more brittle fibers in protected areas and solely to add stiffness, without relying on them for strength, we can create super-light, super-stiff frames that are also incredibly durable and safe. And because the entire frame is made from this tough, durable combination, it offers better overall durability relying on carbon shields or overbuilt sections.

⚠️ WARNINGS!

Bicycling has risks of serious injury or death that cannot be completely avoided. Risk can be minimized by: Reading and following all warnings and instructions in owner's manuals, owner's manual supplements, always wearing a helmet, practice and step-by-step learning, riding in control and within your capabilities.

Catalog text and descriptions are marketing materials, not instructions or guidelines for use!

Visit <http://www.cannondale.com/bikes/tech/safety> for warnings, technical documents, and safety guidelines.

Warning: Reflectors are not a substitute for proper lights. It is your responsibility to equip your bicycle with all state and locally mandated lights. Riding at dawn, at dusk, at night or at other times of poor visibility without a bicycle lighting system which meets local and state laws and without reflectors is dangerous and may result in serious injury or death.

If you ride your bike before dawn or after dusk, your bicycle must be equipped with lights so that you can see the road and avoid road hazards, and so that others can see you. Traffic laws treat

bicycles like any other vehicle. That means you must have a white front and a red rear light operating if you are riding after dusk. Your bike dealer can recommend a battery or generator powered lighting system appropriate to your needs.

Cannondale also strongly urges you to use a flashing light or strobe. All of us at Cannondale who ride at night or in conditions of lower visibility use flashers. They can save your life

Please note: Despite our nagging, members of the Liquigas pro road racing team (and other professional sponsored teams) may appear or race without helmets. We don't think it's a good idea, but they are experienced, professional cyclists and they know the risks. They are also adults, so we respect their right to choose. Despite the intransigence of any teams, we strongly advocate the use of helmets on every ride. Wearing a helmet is perhaps your single best defense against a major medical catastrophe while riding, so buckle up!

Warning: Free riding is inherently dangerous. Read Free ride Warning at <http://www.cannondale.com/bikes/tech/safety.html>

NO WEIGHTS?

Don't believe the hype. Scales differ, and marketing departments have been known to fib. The best way to compare bike weights is to head to your local bike shop. Grab two comparably spec'd and built bikes, and ask the proprietor for a scale. Hang 'em high, and see who's the lightest.
